

Suggested Accessories & Upgrades for Chemical Metering Pumps

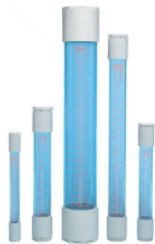

Pulsation Dampeners

Remove 99% or pulsation and hydraulic shock, protecting & enhancing the all around performance of your fluid handling equipment.

Electronic Stroke Control

Automatically control the capacity of any Neptune "dia-PUMP" in response to a process signal. One-piece controller- positioner mounts directly to the pump.

Calibration Columns

A fast, easy and economical means of checking and verifying flow rate of your chemical metering pump.

Gauges, Gauge Guards & Diaphragm Seals

Protect and isolate all forms of system instrumentation from hazardous and corrosive process fluids.

Pressure Relief & Back Pressure Valves

Designed to protect your pump and system from over pressurization, act as an anti-syphon valve, and enhance the overall performance of the pump and system.

Y - Strainer

Help protect your pump and instrumentation from premature failure due to solids present in the process fluid.

Sample Coolers

Used to cool hot water or steam samples for easy handling and effective sample collection from pump inlets and outlets. Cleanable models available.

Coporation Stops & Injection Quills

For use in injecting chemicals pumped into tanks, mains, cooling towers and process systems, including turbulent flow zones or high pressure water or steam lines.

Portable Mixers

Neptune offers mixers for use with tanks, drums, totes and pails. Direct drive and gear drive models available with air motors and 1/20 HP through 5 HP electric motors.

Packaged Chemical Feed Systems

Complete selection of standard & custom chemical feed systems. Skid-mounted units include all components, factory piped, wired and tested.
